EXPERIENCE

Bordellio – *Intern Developer*

bordellio.com.au

My biggest achievement while working at Bordellio was building a pixel perfect landing page in **JSX** and the CSS library **Tachyons**.

I used the skills that I had already developed as well as developed new skills and quickly became familiar with new technologies in order to deliver a high standard of work within the required time frame.

Some of the technologies I had exposure to included **functional CSS**, **Bitbucket/ Git** for version control and **NPM/Yarn** for vendor dependencies.

I was expected to work independently as well as in a team which was conducted in an agile environment using Trello.

I was also involved in competitor analysis, auditing the application then making changes where necessary to ensure that the products functionality, usability and appearance was compatible with all browsers and devices.

My work was peer reviewed and I also performed pull requests.

Eloras Tees

eloranorman.design

Elora Norman at Eloras Tees needed a website to display her designs and apparel.

I had recently become familiar with **CSS Grid Layout** and took the opportunity to build the web-site using the layout system.

Using a mobile-first approach and CSS Grid I was able to quickly and easily change the layout for different screen sizes.

Belle Fleur Nail and Beauty

bellefleurnailandbeauty.com

Belle Fleur Nail and Beauty needed a website for her at home nail

ABOUT

I am a self taught web developer. Some of my skills include **HTML5**, **CSS3** and **JavaScript**.

You'll usually find me behind my laptop tinkering, building stuff, and expanding my skills as a developer.

When I'm not coding I enjoy reading, exploring, baking and attending Meetups.

and beauty business.

The website had a lot of information to display and needed to be easy to navigate for mobile and larger devices.

Using **JavaScript** for the mobile and desktop navigation I was able to make the one page site easy to navigate.

I built the website for Belle Fleur Nail and Beauty using **Bourbon's flexible lightweight Sass grid: Neat**.

I chose Neat grid as it is lightweight and needed a framework only for the grid.

Using Neat's mixins also meant I could keep my markup semantic.
