#### **EXPERIENCE**

## Bordellio - Intern Developer

bordellio.com.au

During my work experience at Bordellio I had exposure to numerous technologies including **BitBucket/ Git** for version control, **NPM/ Yarn** for vendor dependencies and conducting out work in an **agile** environment.

I built the coming soon page in **JSX**, while using the CSS library **Tachyons** using **functional CSS**. My work was **peer reviewed** and I also performed pull requests.

Some of my other responsibilities included **competitor analysis**, **auditing** the application using different devices and Xcode simulator then making changes to ensure the application appeared as desired over all devices and screen sizes.

#### Eloras Tees

eloranorman.design

Elora Norman at Eloras Tees needed a website to display her designs and apparel.

I had recently become familiar with **CSS Grid Layout** and took the opportunity to build the web-site using the layout system.

Using a mobile-first approach and CSS Grid I was able to quickly and easily change the layout for different screen sizes.

# Belle Fleur Nail and Beauty

bellefleurnailandbeauty.com

Belle Fleur Nail and Beauty needed a website for her at home nail and beauty business.

The website had a lot of information to display and needed to be easy to navigate for mobile and larger devices.

Using **JavaScript** for the mobile and desktop navigation I was able to make the one page site easy to navigate.

#### **ABOUT**

I am a self taught web developer. Some of my skills include HTML5, CSS3 and JavaScript.

You'll usually find me behind my laptop <u>tinkering</u>, <u>building</u> <u>stuff</u>, and <u>expanding my</u> <u>skills</u> as a developer.

When I'm not coding I enjoy reading, exploring, baking and attending Meetups.

#### GitHub

qithub.com/iamjessica

#### CodePen

codepen.io/hellojessicagraham

I built the website for Belle Fleur Nail and Beauty using **Bourbon's** flexible lightweight Sass grid: Neat.

I chose Neat grid as it is lightweight and needed a framework only for the grid.

Using Neat's mixins also meant I could keep my markup semantic.

Full work history can be viewed at hellojessica.co/colourist
